

If there's anything you need to develop more about BM/SBM, or if you have anything prepared, please explain it to me.

3 topics:

1. This feature allows BM/SBM to record and save data even in locations without a network connection. This feature allows the mobile app to capture photos and text that can be accessed offline. In other words, when the network becomes available, any data that was previously unavailable can be uploaded immediately. (Maximum 1 Week)
2. Added detailed, comprehensive admin features. This allows for the expansion of multiple dealerships in a separate format (like a delivery app). Revenue distribution can also be adjusted. (Details will be discussed separately.) (Maximum 1 week)
3. Insert a formula and have it been graphed. And add a few more things that were missing in some BM/SBMs. (Maximum 1 week)
