Necessary contents of things that need to be supplemented

1. . BM/SBM PC (web) [When entering total quantity - inspection quantity] only displays tens. Resolved / App OK. (Phase 1, insufficient)
   A. Increase all digits on the web to three digits, and increase the current 500 number in the app to 999.

2. Photography-related issues: BM is more convenient than SBM. For example, add a continuous shooting function when taking a single photo. This allows the image to be saved without pressing the save button. (Currently, a method to simply and immediately process two clicks in the editing function has been implemented (phase 1, insufficient).

3. Distinguish the types of hot water supply and hot water supply systems - separate them as the inspection methods differ. After I return to Korea, I will look into this matter in more detail and let you know.

4. Distinguish the types of refrigerators: There are four types: medium-temperature absorption/direct-fired absorption/turbo/screw. However, the format remains the same.

5. Distinguish the types of boilers: (Explanation based on Korea Electric Test data) - Automatic multiplication of subcategories.

6. Resolving the use of BM/SBM in deep underground areas where the network is unavailable (refer to the file in the solution). Or, propose a better solution and resolve it   (e.g., refer to the Dongsan Board).

7. Compare and confirm the SBM (app/web) inspection advice text and insert any missing items into each item. (phase 1, insufficient; insufficient comparison.)

8. Verify that the personalized page is configured. That is, as if it were a user's personal company.

9. Enter the ID and user phone number in the worker information management, and enter the phone number and user name in the excess. When the platform is the same, let's make it usable. Free users should not be able to print everything on the web, or the printed paper should be printed with "Free User Sample" in gray letters. However, the app is free, and web printing requires payment.

10. When using the app, let's create a space where ads can appear on the front page, and the web as well.

11. Complete separation of BM/SBM operations?

12. What about a free app, paid web version policy? What are your thoughts?

13. How about allowing Excel on the web to be saved as Hangul and then

converted to PDF? (The Hangul version explains how to do this, and Chat will guide you.)

1 4 . Admin enhancements, Baedal Minjok style. Free users should be automatically sorted and a message sent the day before each day. Payments should also be automatically generated and emailed five days before. Regional agency setup. Three-digit number of agencies. Agency-style administration (as you've already figured out).

1 5 . Preparation for the introduction of generative AI requires the collection of a database, so the database collection function must be implemented at this time.

1 6 . During database collection, each table is tagged with numbers and proper nouns, so statistical analysis is performed to actively utilize these tags. For example, the database should be collected by region, inspection company, building name, equipment name, inspection results, machine manufacturer, etc., so that it can be later generated using generative AI.

1 7 . The database should be stored in AWS's own server, collecting all inspection data.

1 8 . The construction sequence for this step ["1. Resolve the building's basement network issue, 2. Insert equation, 3. Re-adjust the admin."]

1 9 . Please provide detailed instructions for the process for the incident on November 3rd, and what to do if this happens again. (Please provide instructions for the process.)

2 0 . How to edit and delete or change pop-ups at https://bluementor.lsmk.kr (Please let me know)

2 1 . Admin Mode: (Recommend a good solution, preferably a delivery app)

    A. Function to add and subtract from the number of employees, and remove previously registered employees who left the company.

    B. For each company's employee information management, the ID and phone number (if the phone number is incorrect, the system will not work) must match to use the paid/free service. If the user's new phone number is updated, the system will continue with the new number.)

    C. Monthly employee count/payment from the start date to the end of each month (if 30 days are not enough, the first month will be calculated based on the number of days) - Payment function - End of each month

    D. User price adjustment function (required for email invoices)
        Five days before the end of each month, a bill is automatically generated and

sent to the registered email address, social media, or the company's main phone number.

E. Notification one day prior to the end of the free period (a separate message will be sent). Subsequently, a paid conversion function – individual or all numbers assigned to each company

F. Information on each company's inspection building, including a function to collect all inspection databases for that company (assignment to a dealership, attribution function, or sole ownership)

G. Immediate access blocking when an inspection company fails to pay

H. Web printing restrictions and DB touch functionality for free users

I. Operation will begin after inspectors are registered by dealership (1, 2, 3, 4, 5, etc.) – (settlement system established)

J. Operation status by dealership

K. Operation will be based on individual worker phone numbers

L. Free (app)/(web) versions will print the text "(sample)" as a watermark when printing.

M. Paid services will remove the watermark when printing from the web. In other words, paid services will remove the "(sample)" text when printing. This content can be directly designated as paid/free/unprintable in LSMK admin mode.

N. Monthly number of workers per company/agency

O. Free/paid user distinction and notification function by subscriber phone number - Sort notification content so the administrator can send it in bulk.

2 2 . How do you resolve the issue of the service crashing every three months? Please tell me.

2 3 . Generative AI will be introduced later.
